**What makes some research more visible?**

**Who becomes tenure-track faculty?**

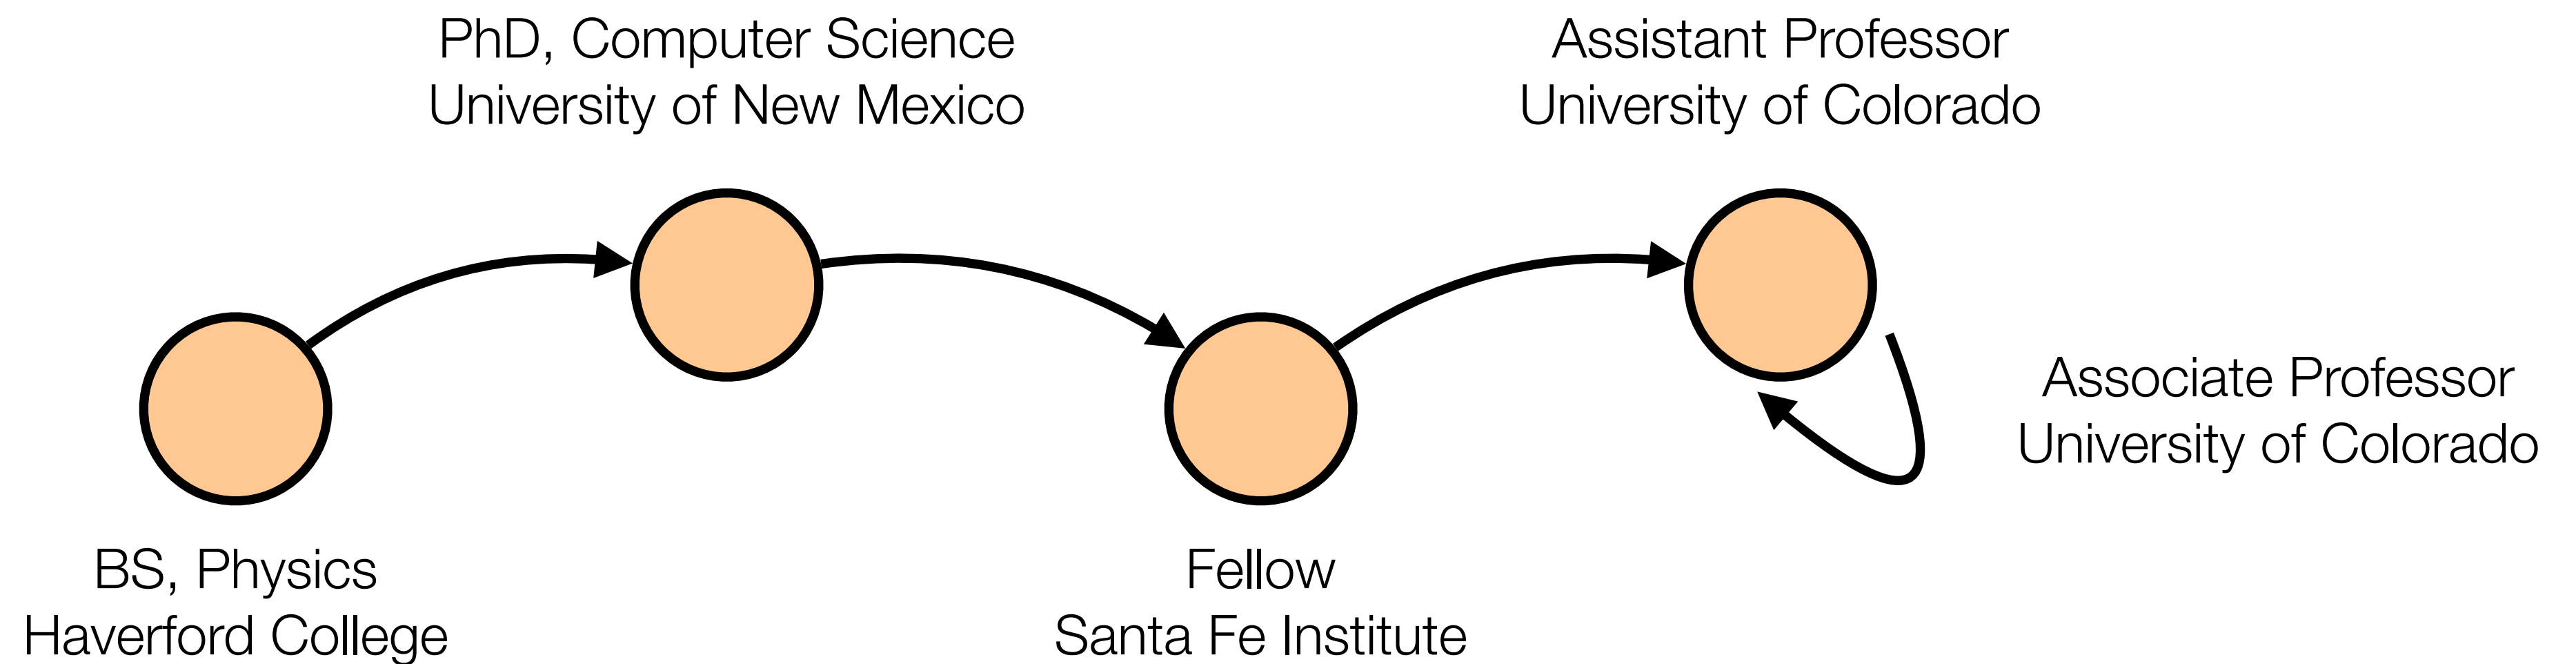

# Outline:

1. Career trajectories and university prestige
2. Institutional prestige shapes scholarship
3. Socioeconomic status shapes academic careers
4. Discuss implications

# Career trajectories form networks

# Career trajectories form networks

# Faculty hiring networks

Each directed edge  $u \rightarrow v$   
PhD from  $u \rightarrow$  faculty at  $v$

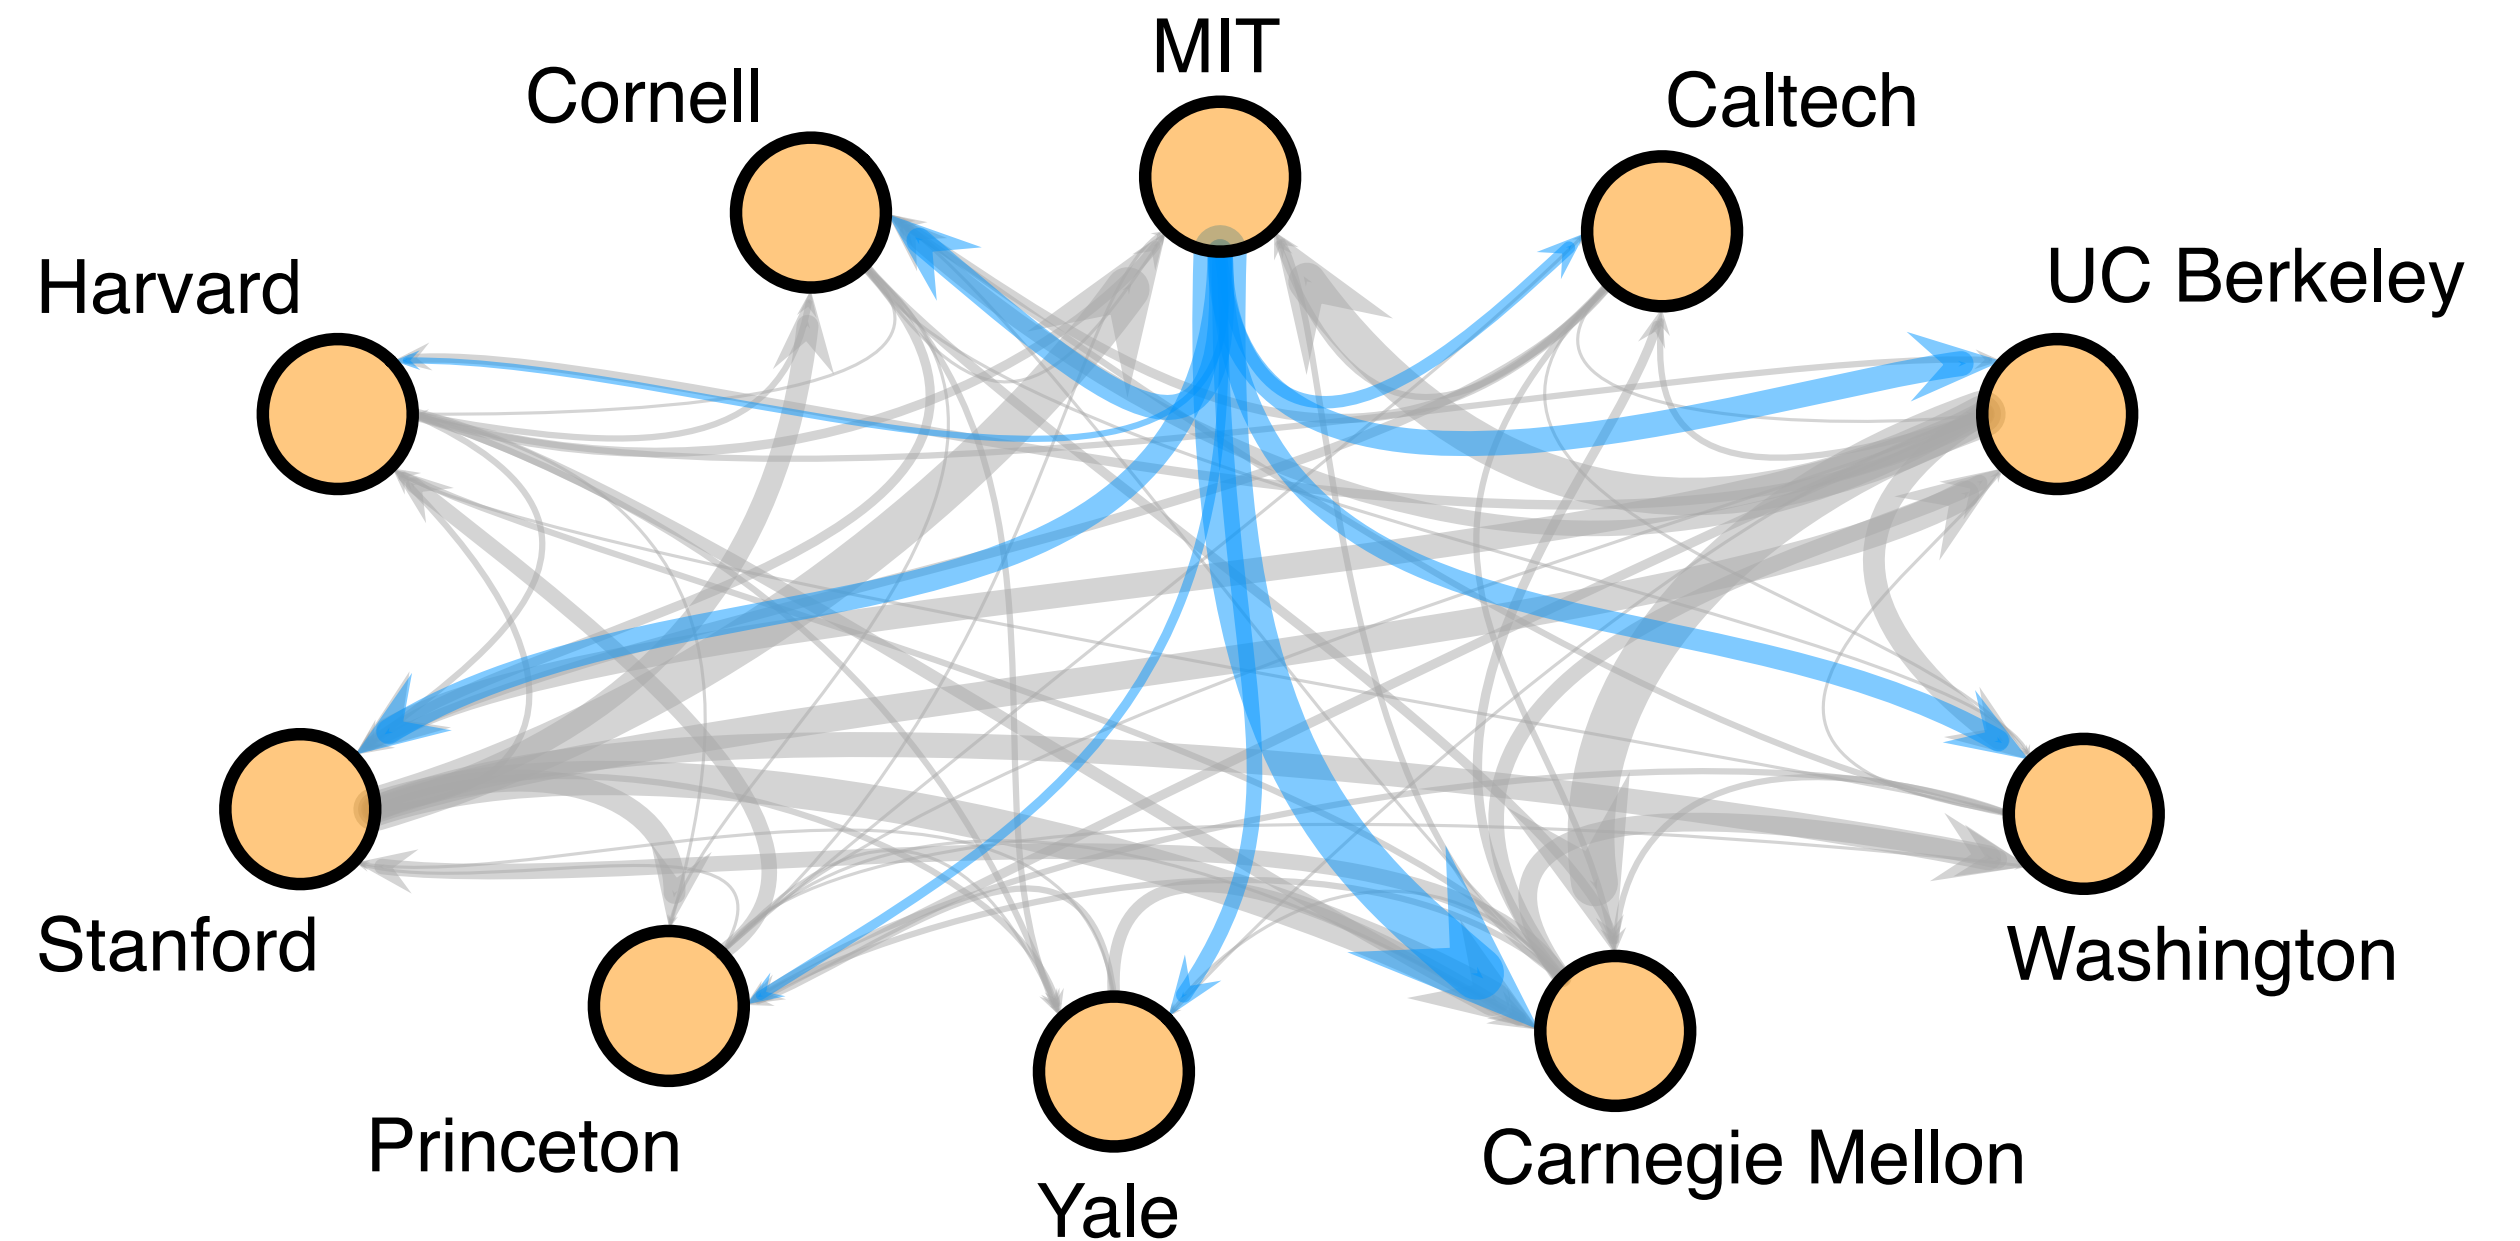

[US academia: big, mobile, self-contained,  
competitive]

Dramatic inequality in PhD production  
[80/20 rule holds]

Common large-scale structure: influential,  
well-connected core

Small percentage of edges are self-loops  
[8% in CS]

Assumption: reveals collective preferences.  
Hiring committees want to hire the best  
candidates

Computer science faculty hiring network;  
<http://tuvalu.santafe.edu/~aaronc/facultyhiring/>

# Features of hierarchy

**systematic**

90% of hiring movement  
is “down” the hierarchy

**steep**

< 7% of faculty have PhD  
from lower 75% of universities

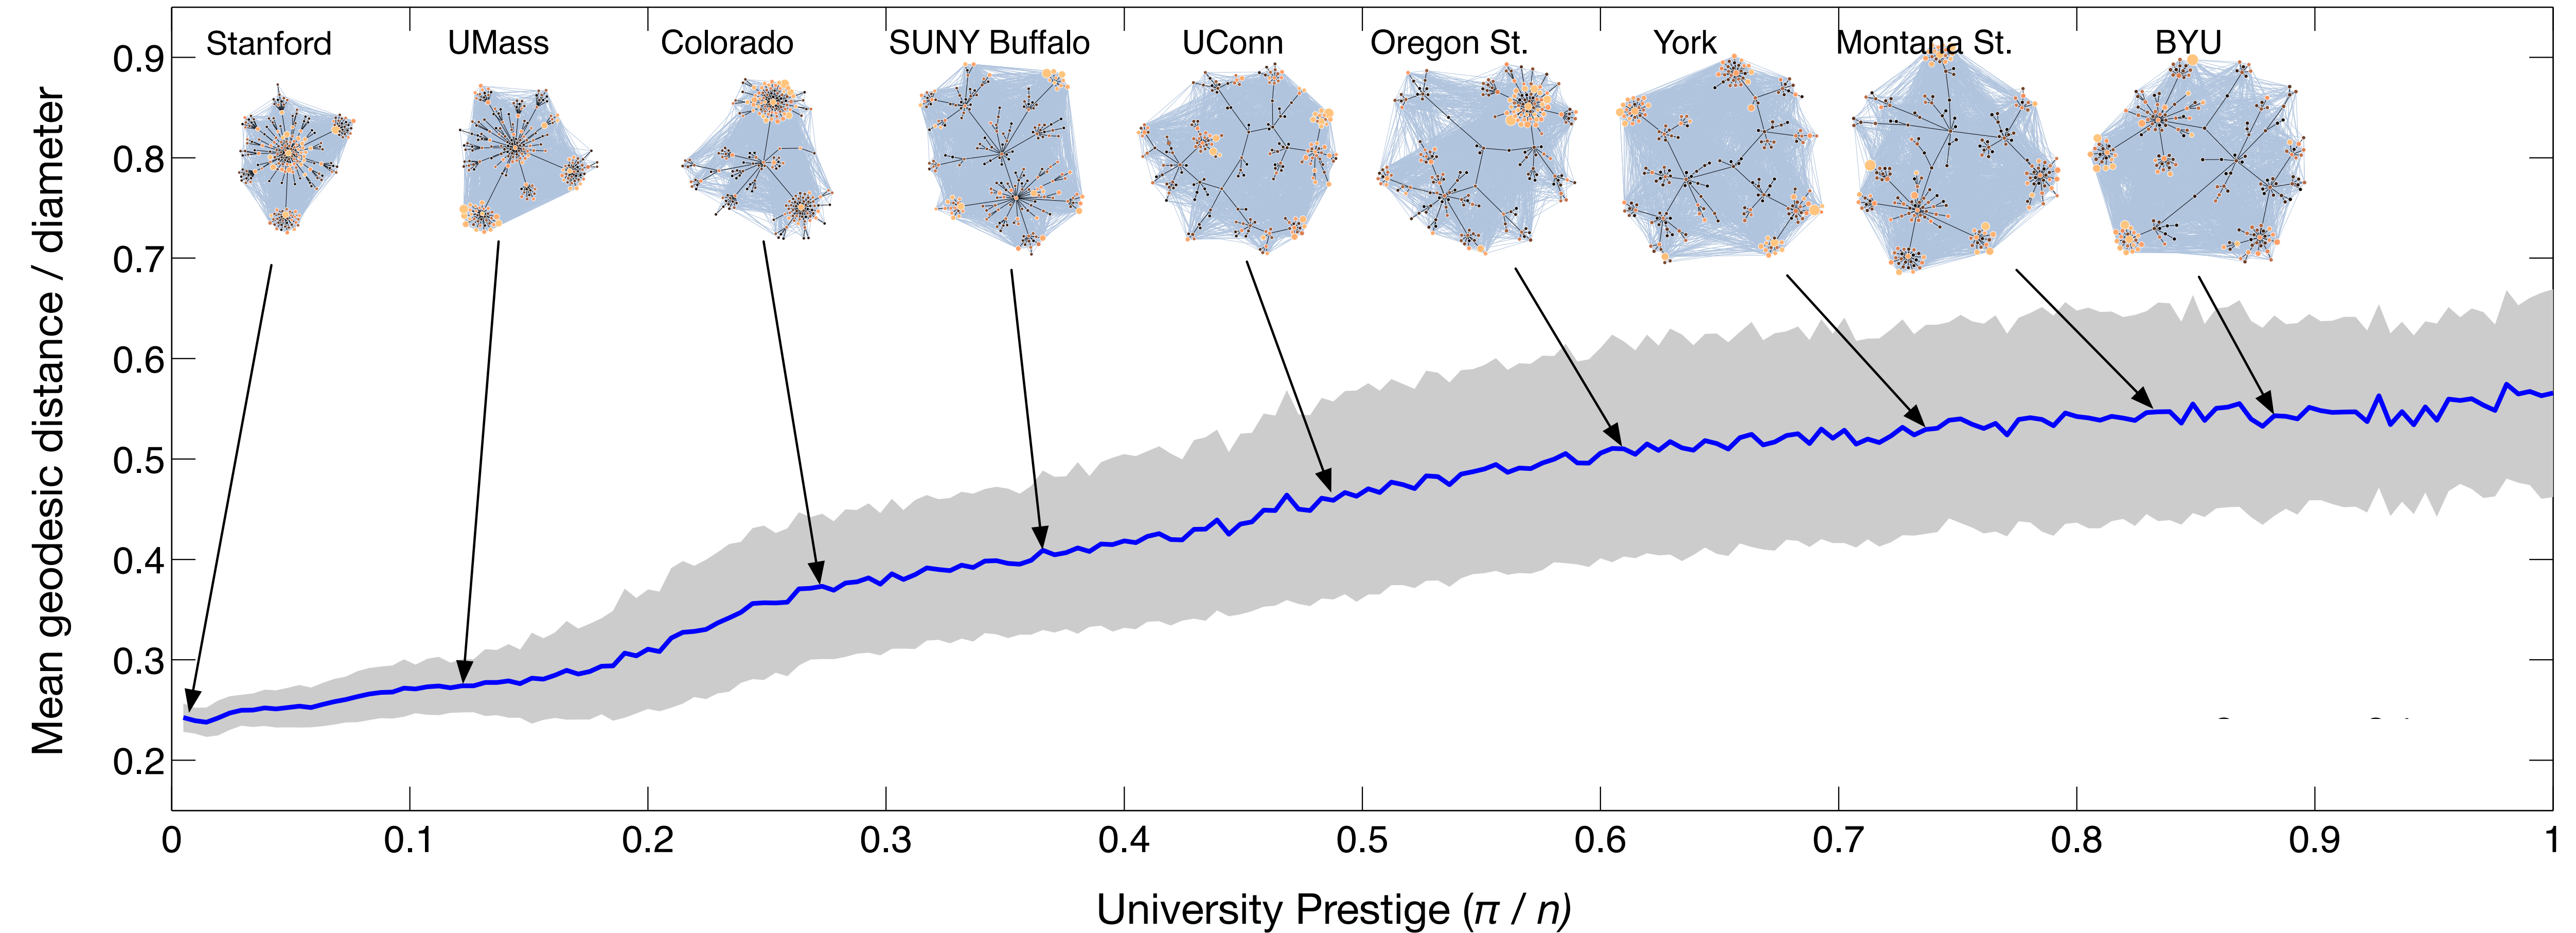

**biased**

median change for women  
~3 ranks worse than men

# Core-periphery position changes with rank

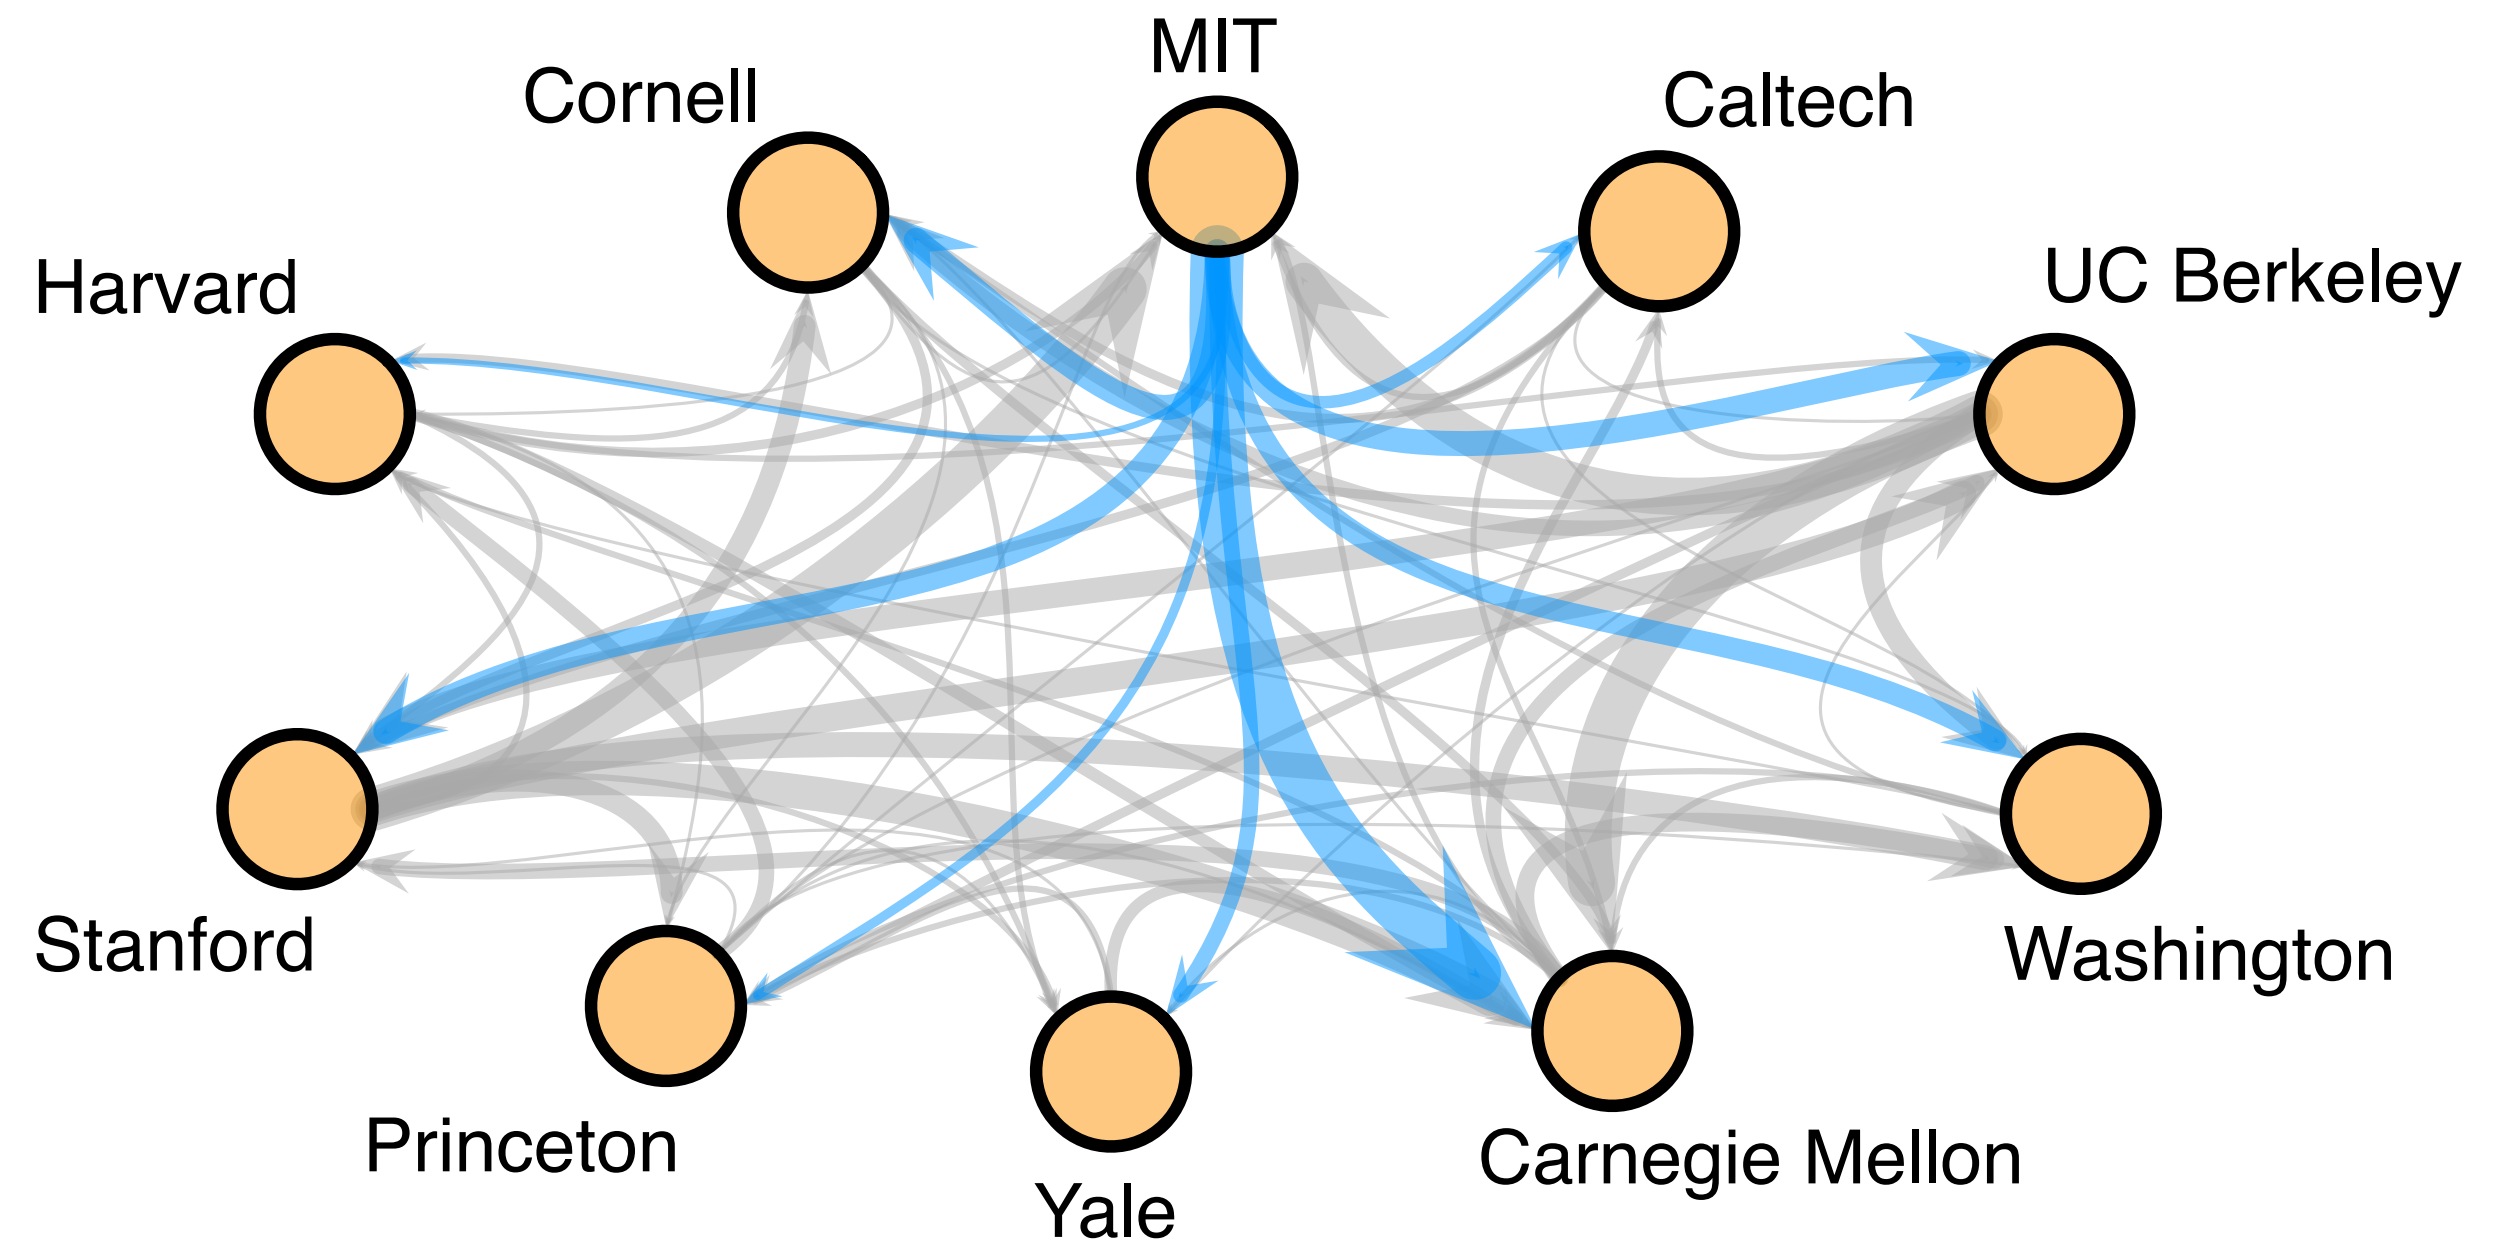

What are the implications?

# Shape of the faculty hiring network

- Large inequalities in placement power
- Faculty flow out of core, into periphery
- Modest fraction stays inside core
- Small fraction flows “upstream”
- Prestige describes influence via individuals placement
- **Next:** How does prestige affect science as a system? How does SES shape researcher prestige?

# Outline:

1. Career trajectories and university prestige
2. Institutional prestige shapes scholarship
3. Socioeconomic status shapes academic careers
4. Discuss implications

# Faculty hiring as a mechanism

**R1:** Are research ideas carried by faculty hiring?

**R2:** Does the structure of the faculty hiring network affect the spread of ideas?

*American Scientist* 55, 156-165 (2005)

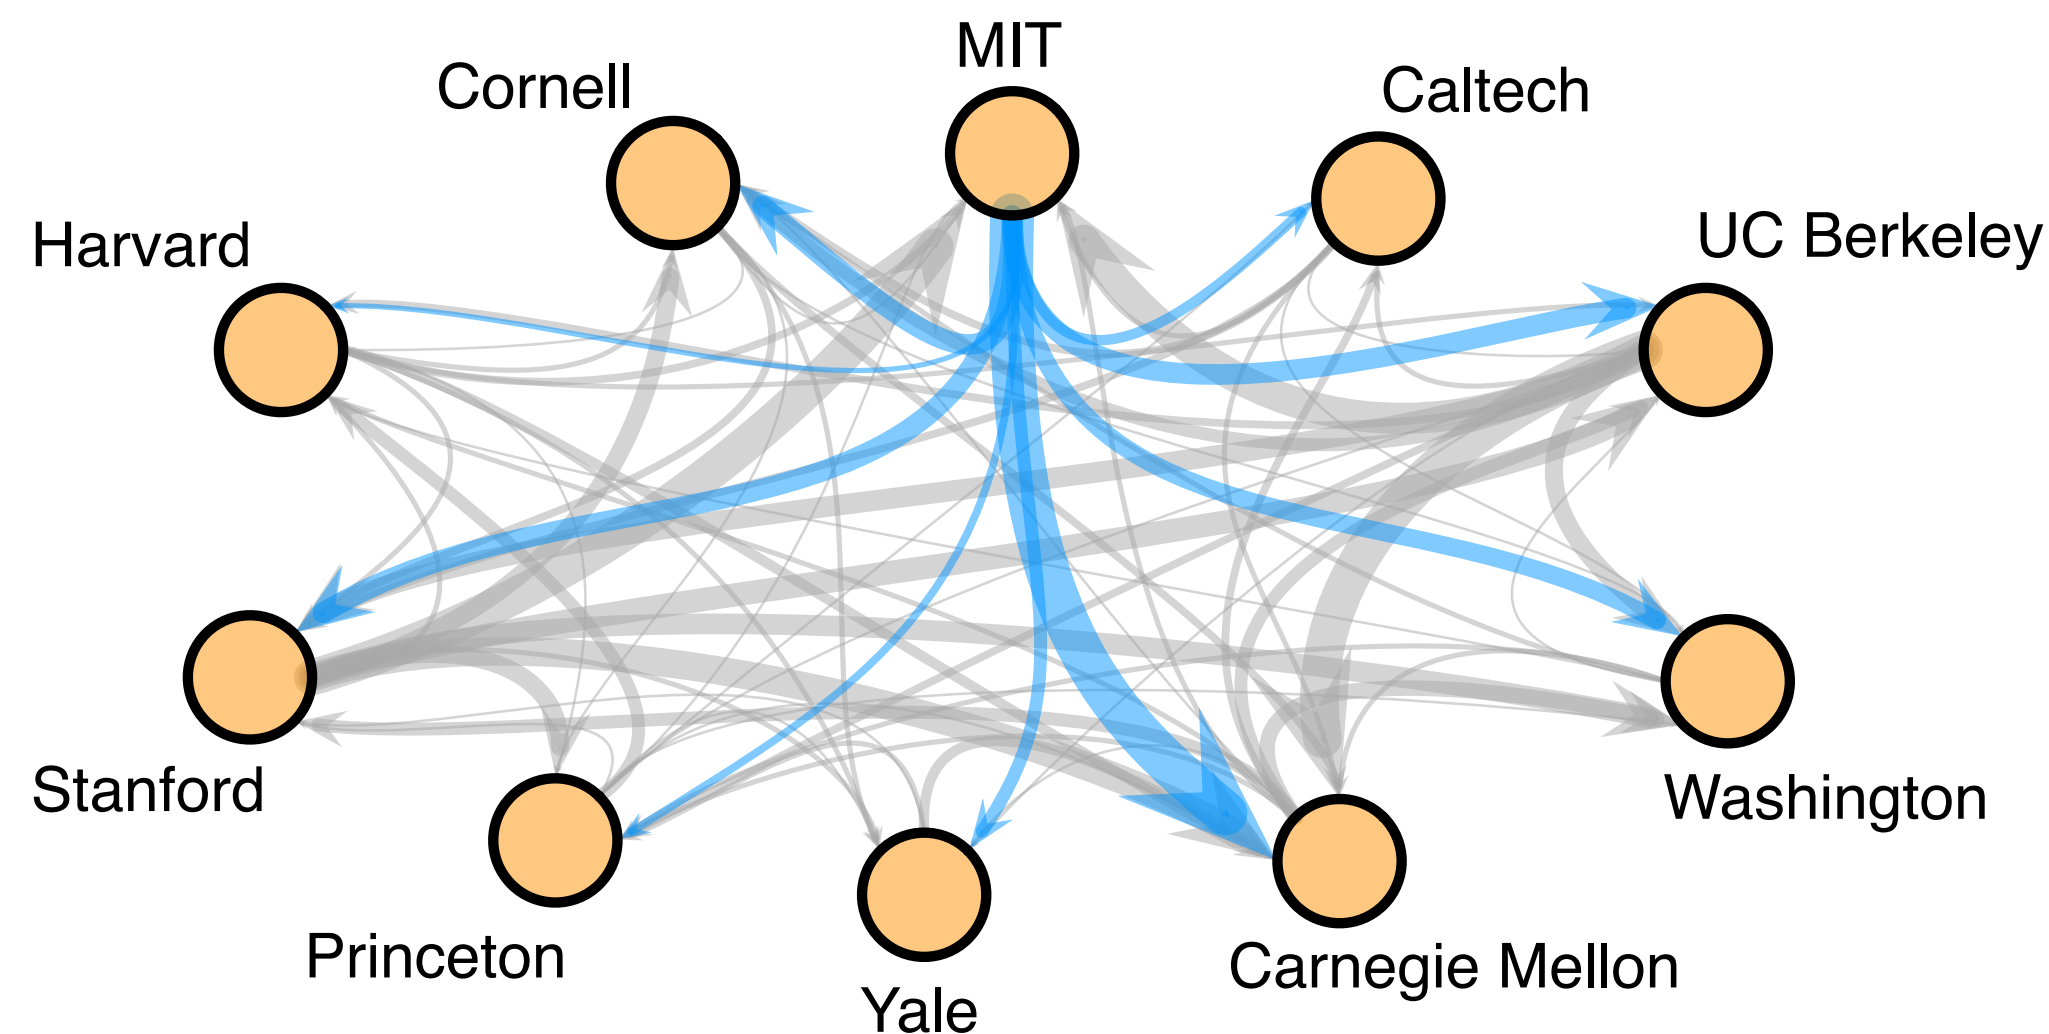

*Proc. 11th Conf. on Web and Social Media* (2017)

*Sci. Adv.* 1(1), e1400005, 2015.

# Does the structure of the faculty hiring network affect the spread of ideas?

Seed an epidemic at a university with unique prestige  $\pi$ , varying the transmissibility  $p$  (quality of an idea)

Quality of idea relates to how many nodes will adopt an idea (on average)

Measure the fraction of universities which adopted the idea

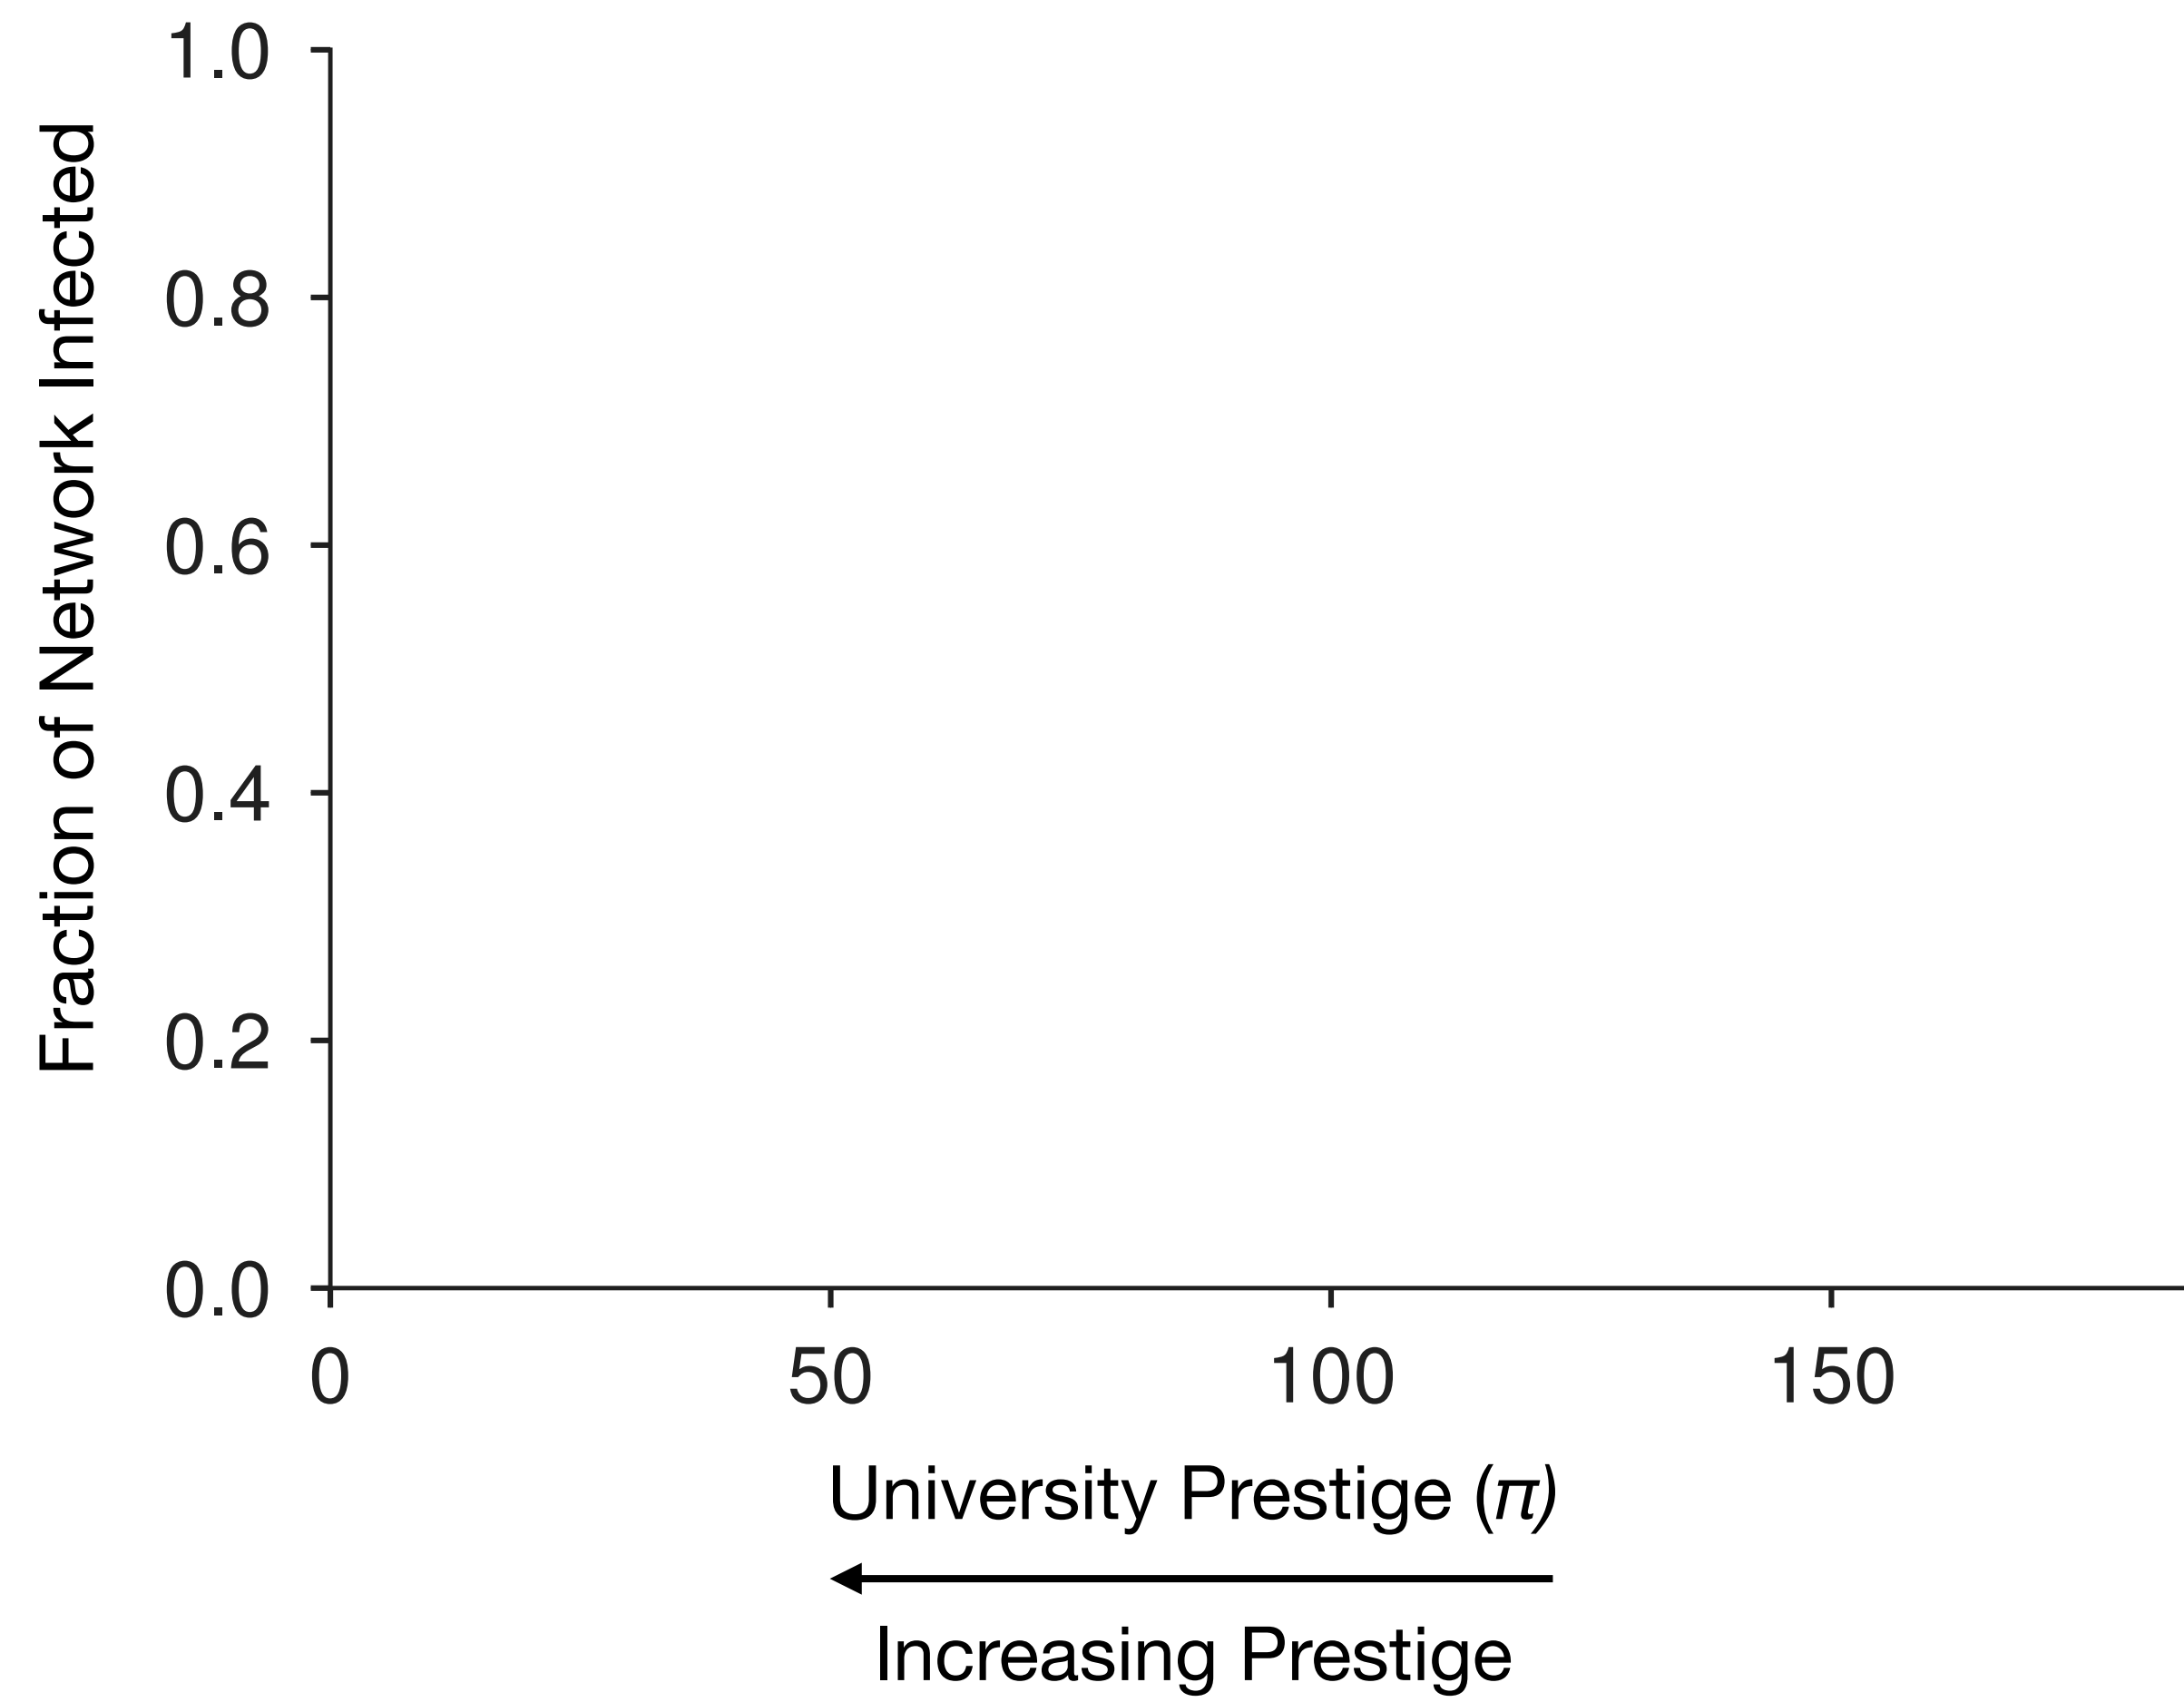

# Does the structure of the faculty hiring network affect the spread of ideas?

Core-periphery position changes with prestige [[link to vis](#)]

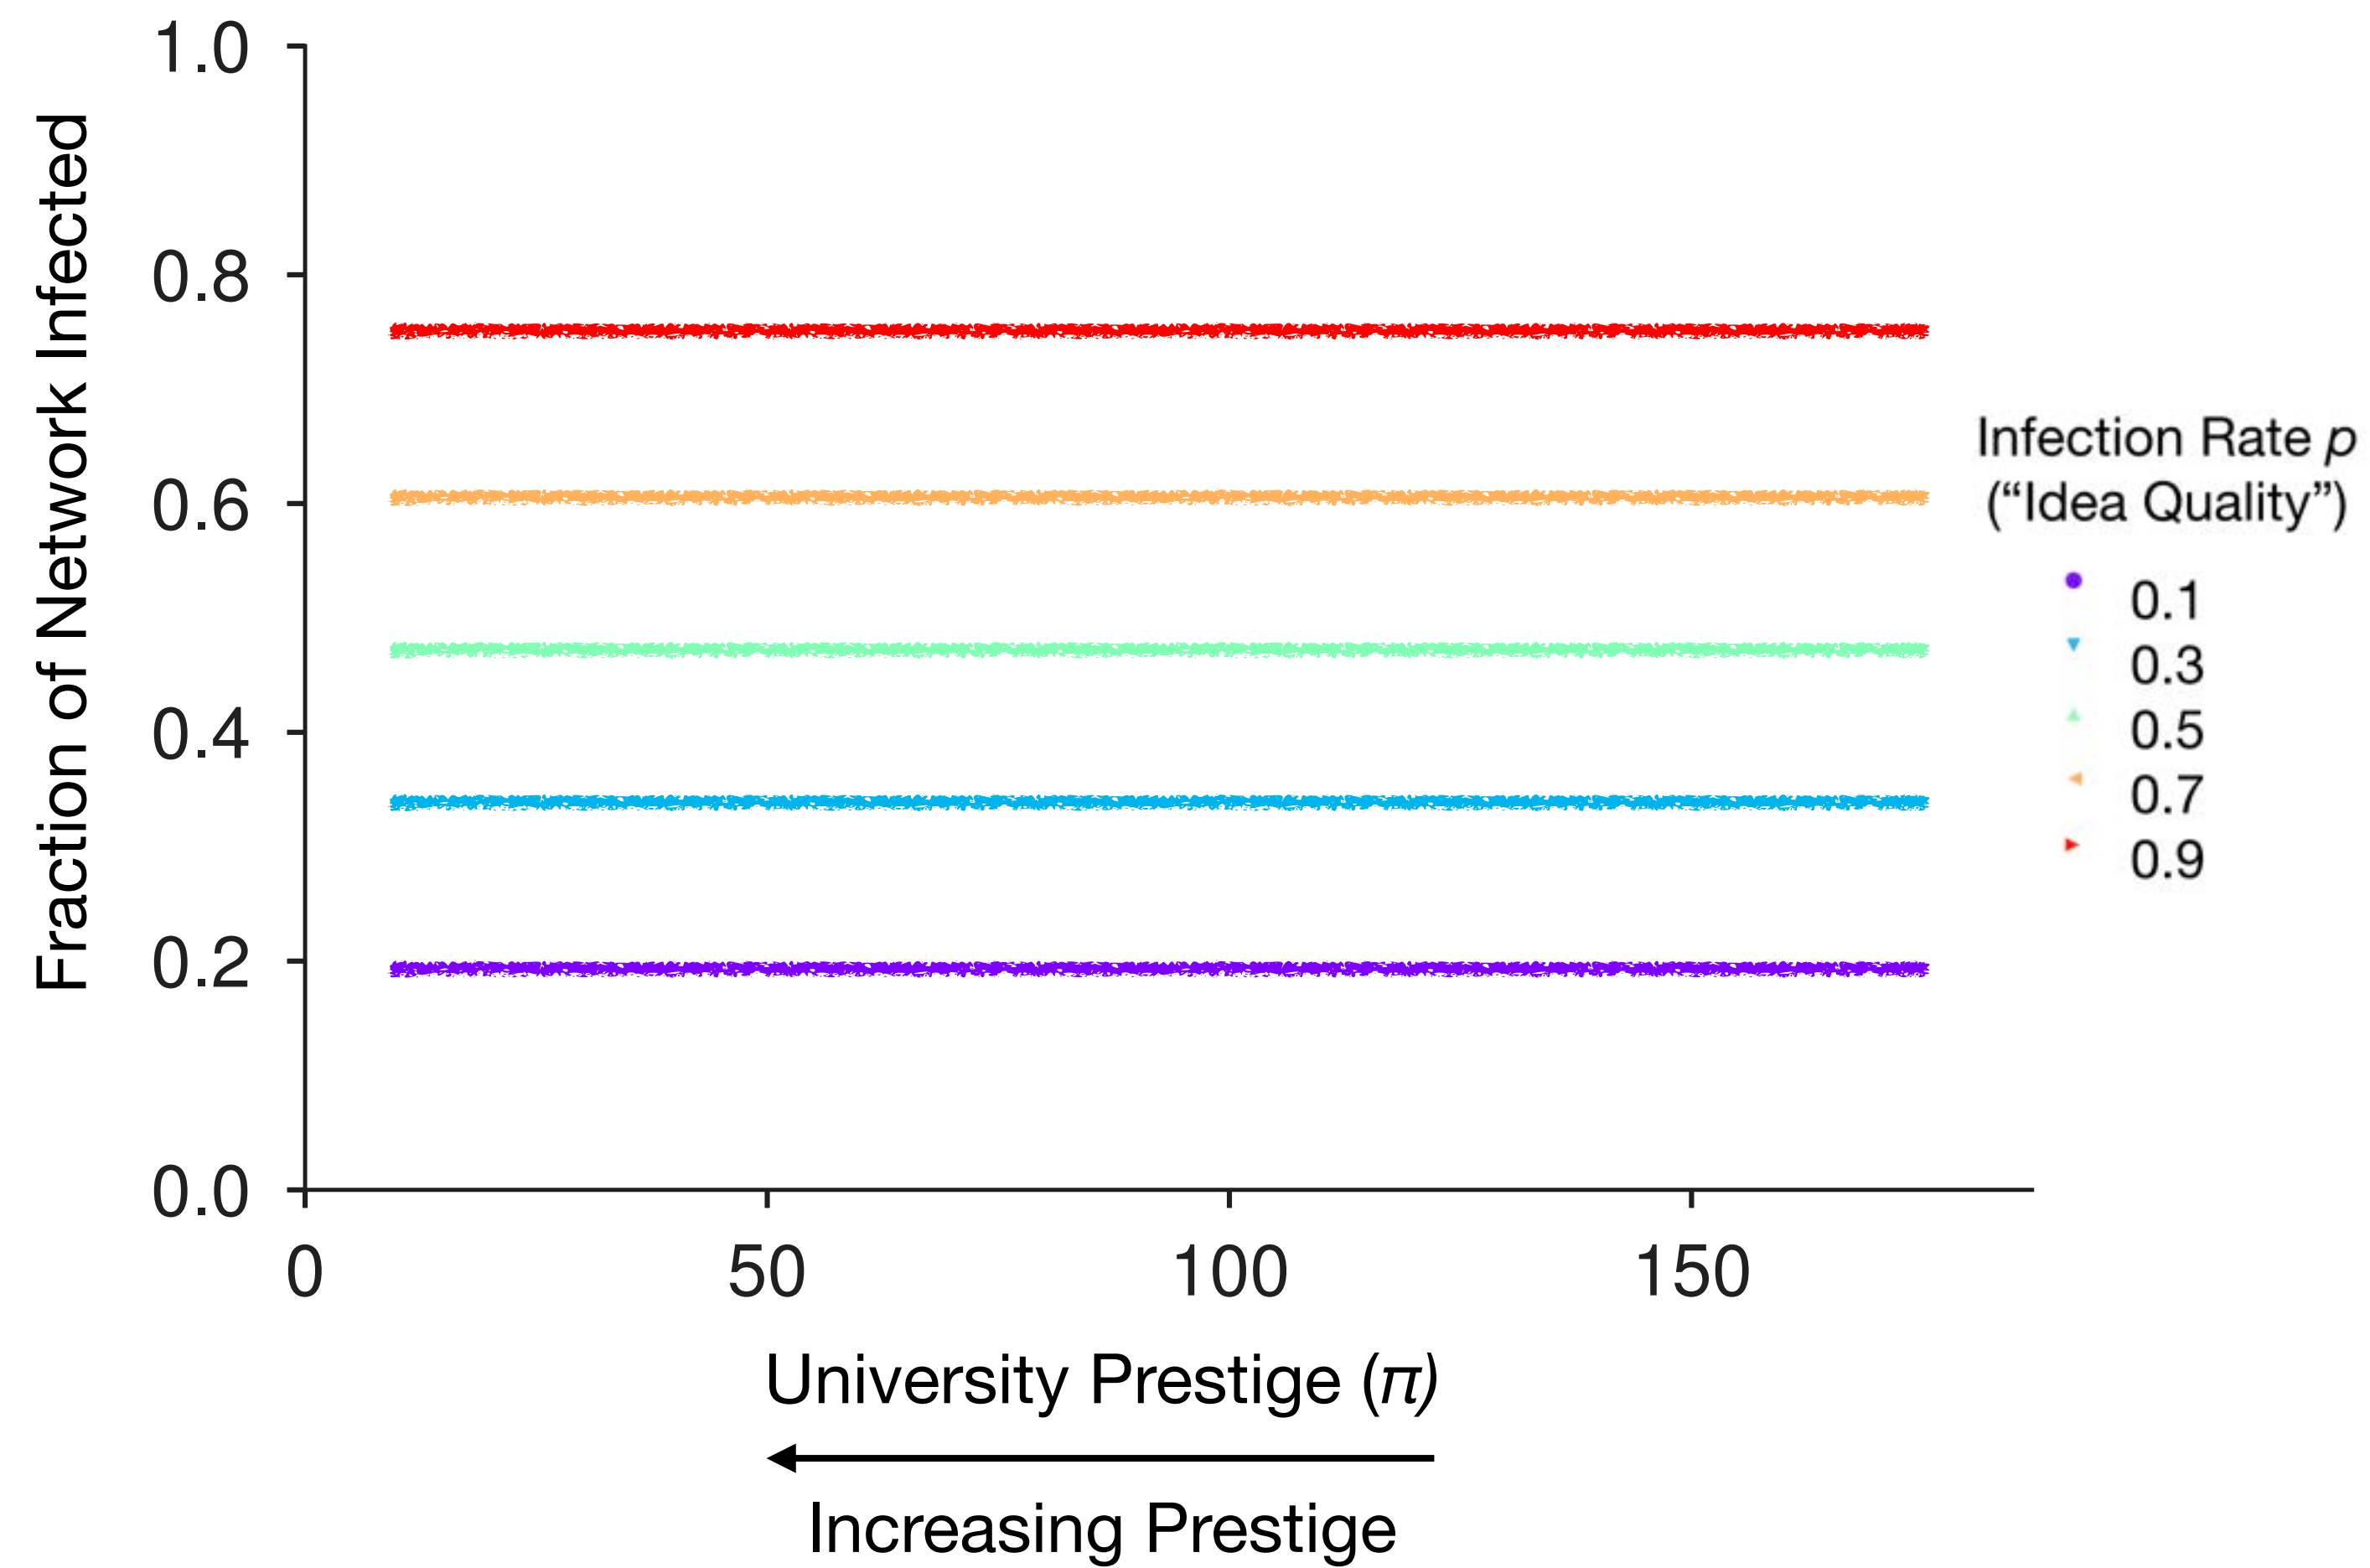

Assuming quality of  
ideas and their origins  
are independent

Poor quality ideas spread more easily from high-prestige universities

Great ideas can spread  
regardless of starting place

We may lose medium quality research ideas because the system structurally disallows their spread

# Outline:

1. Career trajectories and university prestige
2. Institutional prestige shapes scholarship
3. Socioeconomic status shapes academic careers
4. Discuss implications

**Data:** Survey responses from tenure-track faculty in Anthropology, Biology, Business, CS, History, Physics / Astronomy, Psychology, and Sociology across U.S.

Information about professors' parents' education levels (N = 7218; 90.2%), and zip code of where they grew up (N = 4807; 60.0%).

# Methods

**Income:** Linked respondent provided ZIP with average AGI from IRS (1998-2018) in the year closest to when they grew up. Adjusted for inflation.

**Education:** Respondent provided: What was your parents' highest levels of education? Benchmarks come from the Census Bureau and NSF SED.

Founder: [Patrick Kennedy \(1823–1858\)](#)

Probably.

## Aside: Isn't this to be expected?

It might be tempting to take the position that the extreme microclass inequalities uncovered here are not all that objectionable. Should we really care, for example, that the child of the truck driver has a special propensity to become a truck driver while the child of a gardener has a special propensity to become a gardener? Must we truly commit ourselves to equal access to truck driving and gardening? If pressed, we would argue that all ascriptive constraints on choice, even those pertaining to purely horizontal inequalities, are inconsistent with a commitment to an open society. By this logic, *all* types of origin-by-destination association are problematic because they imply that human choice has been circumscribed, a circumscription that is wholly determined by the accident of birth. We care, in other

by the accident of birth. We care, in other words, that the truck driver is fated to become a truck driver at birth because that amounts to a stripping away of choice, and most of us would embrace an open society in which choices are expanded, not stripped away. Although our illustrative nonchoice (i.e., being a truck driver versus being a gardener) may not have implications for total rewards (of the sort that are *consensually* valued), it is nonetheless a fateful nonchoice that determines the texture and content of a human life. It is this commitment to an open society, sometimes left quite implicit, that underlies the discipline's long-standing interest in monitoring marital homogamy, occupational sex segregation, and many other forms of ascription that are hybrids of vertical and horizontal processes.

“It’s a Decent Bet That Our Children Will Be Professors Too” Jonsson, Grusky, Di Carlo, Pollak (2009)

# Relationship between prestige and SES

# Relationship between prestige and SES

# Relationship between prestige and SES

The relationship between the current institutional ranking of faculty and whether they have a parent with a PhD. Lines show the relationship for faculty born in different time periods.

# Relationship between prestige and SES

Percentage of faculty with at least one parent holding a PhD, stratified by prestige of the faculty's current institution. Green upward arrows describe faculty at top 20% of institutions by USNWR or NRC ranking, and downward arrows the bottom 20% of ranked institutions. The black line describes the average proportion of faculty with PhD parents.

# Relationship between prestige and SES

Linear regression of current institutional prestige as a function of neighborhood, estimated income, and parents' highest education.

	Model I	Model II	Model III
Urban neighborhood	0.129 (0.050)	0.552 (0.052)	0.914 (0.054)
Average income (standardized)		-1.447 * (0.037)	-1.352 * (0.038)
Parents' highest degree:			
Elementary			-2.946 (0.172)
Some high school			-1.816 (0.191)
High school			-4.873 * (0.065)
College			-4.416 * (0.063)
Masters			-5.177 * (0.059)
PhD			-6.889 * (0.061)
Adjusting for discipline, race / ethnicity, gender, PhD prestige	Yes	Yes	Yes
Adjusted $R^2$	0.105	0.107	0.109

# Relationship between prestige and SES

Linear regression of current institutional prestige as a function of neighborhood, estimated income, and parents' highest education.

	Model I	Model II	Model III
Urban neighborhood	0.129 (0.050)	0.552 (0.052)	0.914 (0.054)
Average income (standardized)		-1.447 * (0.037)	-1.352 * (0.038)
Parents' highest degree:			
Elementary			-2.946 (0.172)

Masters			-5.177 * (0.059)
PhD			-6.889 * (0.061)
Adjusting for discipline, race / ethnicity, gender, PhD prestige	Yes	Yes	Yes
Adjusted $R^2$	0.105	0.107	0.109

# Outline:

1. Career trajectories and university prestige
2. Institutional prestige shapes scholarship
3. Socioeconomic status shapes academic careers
4. Discuss implications

## Academic workforce

**Who becomes  
faculty?**

**What influences  
their visibility?**

# Implications

Ideas spread in academia via faculty hiring. The structure of this network can privilege elite institutions.

**Caveats:** Model assumes quality is independent of institution and hiring decisions.
